PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/567,753	Applicant(s) DI GIORGIO ET AL.	
	Examiner PHUOC H. DOAN	Art Unit 2617	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 August 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 37-72 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 37-72 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 08/19/08 have been fully considered but they are not persuasive.

In response to the Applicant's remarks on pages 2-4, the Examiner disagree, because Dennis discloses users add telephone number into a profile list or configure profile information on the wireless device which linked to the wireless network (see Abstract of Dennis), and clearly discloses that user can select to have a default setting which is stored the number into memory or user could assign special codes of country and a local (see col. 4, lines 25-40, col. 5, lines 23-51). In combined, Rogers clearly discloses **a mobile device contains a prefix storage** are containing one or more prefixes that may be automatically pre-pended to a destination telephone number, this feature are exactly the same as claimed limitations "user indicators stored in a terminal for telecommunication networks" (see Abstract of Rogers). Further more, Rogers discloses a country prefix and a local prefix that provided a country prefix and a local prefix that are the same as the claimed limitation "a country prefix and a local prefix" (see col. 6, TABLE 1; col. 6, lines 1-64).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 37-72 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dennis (US Patent No: 6,542,733) in view of Rogers (US Patent No: 6,360,108).

As to claim 37, Dennis discloses a method for processing user indicators stored in a terminal for telecommunications networks (See Abstract "Users add telephone number and configure profile information on the wireless device which linked to the wireless network"), comprising: selectively organizing said indicators in one of a plurality of configurations (page 3, lines 20-40 "allows the user to enter telephone numbers or other information"), said plurality comprising at least a first and a second configuration (col. 4, lines 5-40 "the personal profile system can be configured so that the user can select special code or long distance service"), said first configuration comprising identifiers organized with the insertion of an identification code of an operator selected by the user of the terminal and said

second configuration comprising identifiers organized with the inclusion of at least one of a country prefix and a local prefix (col. 4, lines 25-40, col. 5, lines 23-51 “user can select to have a default setting which is stored the number in memory or user could assign special codes of country and a local, for example: 01; 995-555-1234”). However, Dennis does not disclose a country prefix and a local prefix. In the same field of endeavor, Rogers discloses a country prefix and a local prefix (See col. 6, TABLE 1 “provided a country prefix and a local prefix”; col. 6, lines 1-64). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a country prefix and a local prefix as taught by Rogers to the system of Dennis in order to offer the advantage of mobile telephone users when they are traveling.

As to claim 38, Dennis further discloses the method as claimed in claim 37, wherein said identification code of an operator is the identifier of a long distance operator (col. 4, lines 6-10).

As to claim 39, Dennis further discloses the method as claimed in claim 37, comprising generating said identifiers organized in said at least a first and a second configuration by means of an if/then mechanism, in which the if function identifies

at least one value selected from the group of: the number of digits included in the identifier to be organized (col. 4, lines 25-40), and the digits present in specified positions of said identifier to be organized (col. 6, lines 30-40).

As to claim 40, Rogers further discloses the method as claimed in claim 37, comprising generating said identifiers organized in said at least a first and a second configuration by means of an if/then mechanism in which the then function implements at least one function selected from the group of: adding said identification code to the identifier to be organized in said first configuration (col. 3, lines 10-22), and associating with the identifier to be organized at least one of a country prefix and a local prefix in said second configuration (col. 6, lines 1-65).

As to claim 41, Dennis further discloses the method as claimed in claim 37, comprising receiving from the user of the terminal information relating to the location of said terminal and the operation of switching said identifiers between said first configuration and said second configuration following the receipt of this information (col. 4, lines 5-10, col. 5, lines 22-34).

As to claim 42, Dennis further discloses the method as claimed in claim 37,

comprising detecting the location of said terminal and of switching said identifiers between said first configuration and said second configuration according to the detected location of the terminal (col. 6, lines 28-40 “determines the user’s current location, such as by identifying a particular cell/base station or sector that is in communication with the user”).

43. The method as claimed in claim 37, comprising organizing identifiers originally consisting of 7 or 8 digits by adding the digit 0, a local prefix identified by the user and said identification code to the identifier organized in said first configuration, and by adding the character "+", a country prefix and a local prefix provided by the user to the identifiers organized in said second configuration (col. 4, lines 65-67, col. 5, lines 20-39, col. 6, lines 10-65 “software programming designed choice adding character “+” or # in associated a country and local prefix as the same feature of programming of the automatic pre-pending; for example: user can enter the number of digits (e.g., 5 digits, 7 digits, etc.)”).

As to claim 44, Rogers further discloses the method as claimed in claim 37, comprising organizing identifiers originally consisting of 10 or 11 digits by adding said identification code to the identifiers organized in said first configuration, and

by removing a "0" in the first position and adding a country prefix to the identifiers organized in said second configuration (col. 4 lines 65-67, col. 5, lines 20-37, col. 6, lines 34-60 “ software programming designed choice adding or removing “0” and adding a country and local prefix”).

As to claim 45, Rogers further discloses the method as claimed in claim 37, comprising organizing identifiers originally consisting of 12 or 13 digits by replacing the second and third digits with said identification code in the identifiers organized in said first configuration, and by removing a "0" in the first position and the second and third digits, replacing them with an international prefix in the identifiers organized in said second configuration (col. 6, lines 1-65).

As to claim 46, 48, Dennis further discloses the method as claimed in claim 37, comprising organizing identifiers originally comprising the code "00" by replacing the third and fourth digits with said identification code in the identifiers organized in said first configuration (col. 4, lines 10-26), and by removing the first four digits and adding the symbol "+" to the identifiers organized in said second configuration (col. 4, lines 65-67, col. 5, lines 20-37, col. 6, lines 34-60 “ software programming designed choice adding or removing “00” and adding a country and local prefix”).

As to claim 47, the combination of Dennis and Rogers further disclose the method as claimed in claim 37, comprising organizing identifiers originally comprising said country prefix by removing said country prefix and including said identification code in the identifiers organized in said first configuration (col. 5, lines 20-37 of Rogers), and by leaving the identifier unchanged in the case of said second configuration (col. 6, lines 30-40 “the network determines the user’s current location” of Dennis).

As to claim 49, Dennis further discloses the method as claimed in claim 37, comprising: when indicators corresponding to special services are present (col. 4, lines 15-40), leaving the identifier unchanged without carrying out the configuration in said at least a first and at least a second configuration (col. 4, lines 15-40).

As to claim 50, Dennis further discloses the method as claimed in claim 37, wherein said plurality of configurations comprises a network call configuration with an associated identification code consisting of a code for activation of the call

by the network designed to enable said terminal to be called back by the corresponding network (lines 1-54).

As to claim 51, Dennis further discloses the method as claimed in claim 50, wherein said call activation code is associated with a prepaid roaming service (15-26).

As to claim 52, Dennis further discloses the method as claimed in claim 37, wherein said plurality of configurations comprises a debiting configuration with an associated identification code consisting of a billing code (col. 4, lines 1-10), such as a code for configuring the number of said terminal for making calls to be debited to the called user (col. 4, lines 30-40 “the personal profile system can be configured so that the user can select which portion of the destination telephone number is to be use”).

As to claim 53, Dennis further discloses the method as claimed in claim 37, wherein said plurality of configurations comprises an authorization configuration with an associated identification code consisting of a code which authorizes calls

from two or more lines associated with a terminal or with a corresponding card of the SIM type (col. 3 lines 41-67).

As to claim 54, this claim specifies an apparatus necessary to perform the method steps as specified in claim 1 and is therefore rejected for the same reasons.

As to claim 55, claim is rejected for the same reasons as set forth in claim 38.

As to claim 56, claim is rejected for the same reasons as set forth in claim 39.

As to claim 57, claim is rejected for the same reasons as set forth in claim 40.

As to claim 58, claim is rejected for the same reasons as set forth in claim 41.

As to claim 59, claim is rejected for the same reasons as set forth in claim 42.

As to claim 60, claim is rejected for the same reasons as set forth in claim 43.

As to claim 61, claim is rejected for the same reasons as set forth in claim 44.

As to claim 62, claim is rejected for the same reasons as set forth in claim 45.

As to claim 63, claim is rejected for the same reasons as set forth in claim 46.

As to claim 64, claim is rejected for the same reasons as set forth in claim 47.

As to claim 65, claim is rejected for the same reasons as set forth in claim 48.

As to claim 66, claim is rejected for the same reasons as set forth in claim 49.

As to claim 67, claim is rejected for the same reasons as set forth in claim 50.

As to claim 68, claim is rejected for the same reasons as set forth in claim 51.

As to claim 69, claim is rejected for the same reasons as set forth in claim 52.

As to claim 70, claim is rejected for the same reasons as set forth in claim 53.

As to claim 71, Dennis further discloses a card of the SIM type for a telecommunications network terminal “depend on the subscriber to service provider with provide SIM type or PIN for authorization access network”, wherein said card hosts, at least partially, at least one of said storage area and said processing capacity for a terminal according to any one of claims 54 to 70 (col. 4, lines 63 to col. 5, lines 21).

As to claim 72, Dennis further discloses a computer program product which can be loaded into the memory of an electronic computer (col. 6, lines 15-20), containing portions of software code for implementing the method according to any one of claims 37 to 53 (col. 4, lines 63 to col. 5, lines 21).

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the

advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PHUOC H. DOAN whose telephone number is 571-272-7920. The examiner can normally be reached on 9:30 AM - 6:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, KINCAID LESTER can be reached on 571-272-7922. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
